RIGID ADHESIVE TAPE - BULK TAPE SOLD IN CASES

Traditional approach to providing support to joints and body parts for injury prevention or injury management. Used when there is a need to restrict the range of motion of a given joint. Proper taping techniques can aid in the treatment of a wide range of painful musculoskeletal conditions such as lateral epicondylitis (tennis elbow), plantar fasciitis, osteoarthritis, anterior knee pain, patellofemoral pain syndrome, and shoulder impingement syndrome. Most common is a rigid ankle taping technique that helps improve joint position sense.

Adhesive tapes can be manufactured in two main ways, porous and non-porous. Porous tape is manufactured in a manner which facilitates breathability without compromising strength. Sweat vapor moves through the tape which provides greater comfort, especially to those with sensitive skin. Non-porous tape is the traditional approach to tape, where the adhesive coats the entirety of the tape surface. Both processes are beneficial based on your preference.

Porous

COHESIVE TAPE - BULK TAPE SOLD IN CASES

Stays in place while only sticking to itself, not to the skin, while providing support and compression to body parts. Can be used to secure pads, bandages, cold packs and more. There are rigid cohesives that are used in similar applications as rigid adhesives, and elastic cohesive used in similar applications as adhesive elastics.

MUELLER HERO® KITS

Mueller® Hero® Athletic Trainer kits are customizable with interchangeable accessories. The kits are made with a rugged lightweight nylon exterior with reflective piping for increased visibility in low light. The panels are water-resistant where it is needed the most. A fully-open design lets you unzip bags completely for easy packing and unpacking of your gear. The premium zippers, handles and pockets are built to last; and we back these kits with a one year warranty.

Your possibilities are endless with the customizing options of the Mueller® Hero® Athletic Trainer Kits!

Heat and moisture management
More efficient drying
Conforms to foot shape better

360° Comfort Band
MSM Exclusive
Enhanced comfort
Arch support

Seamless Sole
Better fit
Greater comfort
More durable

ADVANCED ANKLE SUPPORTS

Constructed from nylon-vinyl material, these braces are semi-rigid. One of their best features is that you can tighten this brace according to your comfort level. What's more, they're more flexible than rigid braces.

ANKLE SUPPORTS

These are the simplest type of ankle braces. They provide the least support for activities such as light jogging and walking. However, they are ineffective for intense activities, although they do help in reducing inflammation as the result of injuries.

RIGID ANKLE BRACES

These braces come in either stirrup or lace-up styles. A stirrup brace, which provides the most protection, lets you move up and down while protecting your ankle from rolling either in or out. These braces are built of a rigid structure that contain plastic panels to protect your ankle from inversion and eversion. A gel or air filled cushion may be part of the brace to help provide comfort to injured ankle.

KNEE BRACES & SUPPORTS

BUILT IN SPORT. MADE FOR LIFE.®

THE ULTIMATE KNIT SUPPORT

OMNIFORCE® KNEE STABILIZER KS-700

Enhanced Length
Better fit and added comfort

Gel Buttress
Provides focused compression to your kneecap

Advanced 3D Flat Knit
Creates focused support zones, still allowing the product to stretch and maintain constant compression

Coiled Alloy Tensioners
Provides stabilization on both sides of the knee allowing full range of movement

Breathable Material
Moisture management fabric with superior softness and comfort

PATENTED
**TRIAxIAL
HINGE**

Single axis and polycentric hinges were designed prior to research that measured the geometric characteristics of knee motion. All other hinges, regardless of misleading names like "multi-centric", are still simple single axis or double axis hinges which are proven to promote a mechanical mismatch that induces brace migration.

NEAR-NORMAL HINGE MOVEMENT

A functional knee brace must produce near-normal joint motion with minimal restrictions. These criteria may be obvious, but clearly many ACL braces fail to meet them.

SHIFT
The posterior shift of the instant center of the knee (I to II). The corresponding femur-tibial contact point.

DISPLACEMENT
Posterior displacement of the sphere centers on the femoral condyles.

COMPARISON OF BRACE HINGE DESIGN

The simplistic movement of single axis and polycentric hinges are incompatible with the complex motion generated by the knee.

SINGLE AXIS HINGE
Hinge design is fixed at the center pivot and exhibits no posterior displacement.

BIAXIAL HINGE
Two centers of rotation allow only minimal posterior displacement.

TRIAxIAL HINGE
The instant center is always posterior of the central axis and reproduces the near-normal posterior pathway of the knee

HINGE BIOMECHANICS

Measurement in the posterior movement of the rotation center in all three types of hinges available are compared to that of a normal knee. Only *Mueller's Triaxial Hinge* properly tracks the joint.

MILLIMETERS OF POSTERIOR MOVEMENT FROM 0° TO 120° OF FLEXION

THINGS TO CONSIDER WHEN CHOOSING A KNEE BRACE

- 1 WHAT TYPE OF KNEE BRACE DO I NEED?**
Knee braces can be categorized into five types: hinges, stabilizers/braces, supports, sleeves and straps. Hinged knee braces contain hinges which allow the knee to move in a way that is close to the knee's natural motion for the most advanced support, while knee stabilizers/braces contain metal springs on both sides of the knee for advanced support. Knee supports can be adjustable and often wrap around the knee; both provide basic support along with warmth and compression, while knee sleeves are sized and can be slipped on over the knee. Basic knee straps can be used to help relieve various knee pains.
- 2 WHAT STYLE OF KNEE BRACE DO I WANT?**
There are two basic styles of knee braces: slip on and wraparound. Slip on braces are slid onto the knee by placing your foot through the brace's opening and pulling up. This type of brace is sized, as the ideal fit is necessary for proper support. Wraparound knee braces can be placed either in front of or behind the knee, depending on the type, and adjusted with the brace's Velcro straps.
- 3 DO I WANT A KNEE BRACE WITH A CLOSED OR OPEN PATELLA?**
Knee braces are made with a closed patella for those who want their knee cap to receive the same compression and support provided to the rest of the knee. Open patella knee braces allow for any pressure on the knee cap to be relieved, and depending on the particular knee brace, may also allow for additional support and/or proper tracking and movement of the knee cap.

WRIST BRACES & SUPPORTS

BUILT IN SPORT. MADE FOR LIFE.®

HINGED KNEE BRACES

This type of brace is designed to decrease knee pain and provide stability. They come with hinges that provide sideways stability. A hinged knee brace will keep a knee from bending back too far. With this type of brace, a person is able to determine how much their knee will bend and straighten. Hinged knee braces are able to provide a person with the maximum protection and support.

KNEE STABILIZERS & BRACES

Knee Stabilizers & Braces use supportive steel springs on both sides of the knee to help keep it supported but still allowing the joint to move normally. This type of brace is best used for stiff, sore, or floating knees.

KNEE SUPPORTS

Knee Supports provide support to the knee without interfering with natural range of motion or immobilize the joint. The level of support is different based on the features present in the support. Some are a basic slide on design that provides comfortable compression while others have adjustable straps for a more customized compression.

KNEE SLEEVES

Knee sleeves are not the same as knee braces. Knee sleeves provide some support to the knee, but do not hinder its natural range of motion or immobilize the joint in any way. This makes knee sleeves unsuitable for providing support after a knee injury or surgery, but rather they are designed to protect the knee from future injury or risk of further damage to an injured area. This protection is particularly important for athletes that put their knees under pressure every day in activities like running, jumping, or weightlifting.

Knee sleeves also add a valuable compression element which help increases blood flow to the area and reduces pain both during and after a workout as well as any post-workout swelling. The neoprene material that knee sleeves are made of make knee sleeves an excellent option to wear post-injury as they provide some support but still allow the knee to strengthen naturally.

KNEE STRAPS

Knee straps are designed to compress the tendons surrounding the knee and help redistribute the tension. There is also some evidence that knee straps can be used to keep tendons properly aligned. Knee straps can be worn above or below the knee, depending on the knee injuries plaguing the athlete.

	Max Knee Strap	Advance Patella Strap	Jumper's Knee Strap	ITB Strap
Sizes Available	OSFM SM/MD; LG/XL	OSFM	OSFM	OSFM

MUELLER GREEN

EARTH FRIENDLY

BRACES & SUPPORTS

Mueller Green is created from a material made without the use of petroleum, and the green inner lining is manufactured with 67% recycled plastic PET bottles. The spandex binding is made from 73% recycled materials. Even the packaging is recyclable and printed with soy-based inks, bringing our commitment to the earth full circle.

SOFT, DURABLE OUTER FABRIC

CORE MADE WITH NON-PETROLEUM BASED MATERIALS

LINING MADE OF 67% RECYCLED PET BOTTLES

FROM BOTTLES TO FABRIC: THE GREEN PROCESS

Common PET bottles are washed, ground and extruded into fabric.
